

Appendix A

RON HODGSON'S SUBDIVISION PROPOSAL AND APPROVAL FLOWCHART

The diagram printed on the following page was created by parks and recreation expert Ron Hodgson. It attempts to identify the relationships between the many interactive factors involved in protecting structures located in Urban-Wildland Interface developments.

Intervention to minimize damage can occur in various ways. For example, better roads and/or water systems may be constructed, subdivision review and approval can require mitigation of fire hazards, or vegetation can be modified around structures. Most or all of the factors listed on the diagram should be addressed when planning a new or improving an existing development in the Urban-Wildland Interface.
